Professional Summary

Detail-oriented **AWS Cloud, Linux, and Networking Engineer** with strong knowledge in **cloud architecture, Linux server administration, networking fundamentals, and security**. Hands-on experience in configuring **EC2, VPC, IAM, S3, Load Balancers, Routing, Firewalls, and Monitoring**. Skilled in system troubleshooting, automation using Shell scripting, and deploying scalable cloud solutions. Passionate about building secure infrastructure and improving system reliability in modern IT environments.

Key Skills

- **Cloud:** AWS EC2, S3, VPC, IAM, CloudWatch, RDS, Lambda, Route53, API Gateway, CloudFront
- **Linux:** OS Installation, Kernel Upgrade, RPM/YUM, File System Management, Permissions, Cron Jobs, Logs
- **Networking:** TCP/IP, Subnetting, DHCP, DNS, NAT, VPN, Routing, Switching, Load Balancers (ALB/NLB)
- **Scripting:** Bash/Shell Scripting, Automation Scripts, Basic Python
- **Tools & DevOps:** Git, Version Control, Monitoring, Server Hardening, Troubleshooting
- **Soft Skills:** Communication, Problem Solving, Team Collaboration, Quick Learning

Projects

Serverless CRUD Application on AWS

- Designed and deployed a fully serverless application using **Lambda, DynamoDB, API Gateway, S3, CloudFront**.
- Configured **VPC, IAM Roles, Security Policies** ensuring secure API access.
- Deployed a static web frontend on **S3** with global content delivery using CloudFront.
- Implemented scalable NoSQL architecture using DynamoDB with high availability.
- Integrated Route53 for DNS routing and improved application accessibility with custom domain mapping.
- Enabled request validation and throttling on API Gateway for enhanced security.
- Configured CloudWatch logs for API monitoring, troubleshooting, and performance optimization.
- Ensured cost optimization by implementing lifecycle rules and resource monitoring practices.

Linux Automation Program – Python

- Developed a Python-based automation program to generate formatted multiplication outputs.
- Implemented optimized loop structures ensuring improved execution performance.
- Enhanced readability with structured formatting and user input validation.
- Integrated automated logging for better debugging and error tracking.
- Converted the script into a reusable module for scalability and future enhancements.
- Added command-line support to accept user inputs dynamically for different scenarios.
- Implemented exception handling to ensure smooth runtime execution and error reporting.
- Packaged the script with documentation for easy reuse and version control.

Education

B.E – Computer Science Engineering – Vinayaka Mission's Kirupananda Variyar Engineering College	2024
Diploma in Automobile Engineering – Elumalai Polytechnic College	2019

Certifications

- | | |
|--------------------------------|---------------------------------|
| • AWS (Amazon Web Services) | • CCNA – Networking Associate |
| • Linux Administration | • Cloud Computing Essentials |
| • Shell Scripting Fundamentals | • Serverless Application Basics |

Key Achievements

- Successfully deployed end-to-end AWS serverless architecture project.
- Managed Linux systems with 100% uptime during monitoring periods.
- Automated repetitive tasks using Shell scripts reducing manual work significantly.
- Recognized for strong troubleshooting and quick learning during training.
