Address: 19A, kalasanthi kattalai street, Kumbakonam

Skills

- Siemens PLC
- PLC & Ladder Logic
- HMI & SCADA
- TIA portal
- Function Block Diagram
- Statement list
- Type writing
- Microsoft Office
- Arduino
- LabVIEW software
- Programming languages

Certifications

- Senior grade in Type writing English – Government of Tamil nadu, Department of technical education
- TCS iON Career edge - Young professional
- Introduction to Electric Vehicles - Great Learning

Awards

Rajya Puraskar award in Bharat Scouts and Guides

Languages

- Tamil
- English

Hobbies

- Passionate about playing football, which strengthens my teamwork and focus skills
- I like spending time drawing, especially during my free time

Education

Master of Business Administration | Amrita Vishwa Vidyapeetham
2026 - 2028 | Specialization: General Management (Online)

Bachelor of Technology | Sastra University, Thanjavur
2021 - 2025 | Electronics and Instrumentation Engineering
Cumulative Grade Point Average : 7.22

12th Grade | Town Higher Secondary School

2020 - 2021 | Percentage of Marks : 88.47%

10th Grade | Town Higher Secondary School

2018 - 2019 | Percentage of Marks : 90.8%

Work experience

System Engineer Trainee, Megatech Control, Chennai (Aug 2025 - Present)

- Gained hands-on experience in Siemens S7-300, S7-400, S7-1200, and S7-1500 PLC systems, TIA Portal, WinCC, and SCADA, working on hardware configuration, I/O addressing, and ladder logic programming. Worked in real-time industrial projects for companies like Brakes India, including the Dust Collector System, Sintering Project, and also supported in the AAP project, handling PLC programming, HMI/SCADA development, and process automation tasks. Also experienced in programming using Ladder, FBD, and STL languages.

Internship

In-plant Training, Tamilnadu Transmission Corporation Limited (June 2024)

- During my in-plant training at the 230/110 kV Substation under Tamilnadu Transmission Corporation Limited, I gained knowledge of power transmission, distribution and substation operations and the role of transformers in voltage regulation for efficient and safe power management across the grid.

Projects

Mini project, Simulation of Vertical and Planar type OECTs

- In this project, I designed planar and vertical OECT structures using TCAD software, studying their characteristics. The structures were implemented based on 2D diagrams, helping me understand both TCAD and OECT characteristics.

Major project, Priority-based load scheduling in smart home energy management system using Genetic algorithm

- Designed a smart load scheduling system using Genetic Algorithm and implemented it in real time using Arduino ESP32, relay modules, and household load hardware. Gained hands-on experience in MicroPython, embedded systems, and optimization techniques.
